

Precision Adjustable Shunt Voltage Reference

DESCRIPTION

The GP431 is a three-terminal adjustable shunt voltage regulator with specified thermal stability. The output voltage can be adjusted to any value between V_{REF} and 36V by using two external resistors. The GP431 offers low output impedance for improved load regulation with a typical output impedance of $200m\Omega$. Because of the active output circuitry, the GP431 can replace the zener diodes in applications with improved turn-on characteristics.

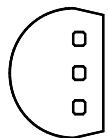

FEATURES

- Initial voltage reference accuracy of 0.5%, 1.0%, and 1.5%
- Sink current capability from 1mA to 100mA
- Typical output dynamic impedance less than $200m\Omega$;
- Adjustable output voltage from V_{REF} to 36V
- Available in 3L-T092 and surface mount SOT89, SOT23 and 8 pin SO packages
- Low output noise
- Typical equivalent full range temperature coefficient of $30ppm/^{\circ}C$

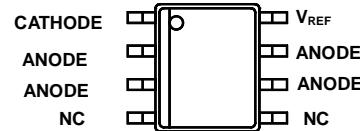

APPLICATIONS

- Voltage Reference
- Precision shunt regulator
- High current shunt regulator
- PWM down converter with reference
- Voltage monitor

ABSOLUTE MAXIMUM RATINGS (Note 1)

Cathode to Anode Voltage (V_{KA}) (Note 2)	-0.3V to 37V
Continuous Cathode Current (I_k)	-100mA to 150mA
Reference Input Current (I_{REF})	-50 μ A to 10mA
Maximum junction temperature range, T_J	150°C
Storage temperature range	-65°C to 150°C
Lead temperature (soldering, 10 seconds)	260°C

Note 1: Exceeding these ratings could cause damage to the device. All voltages are with respect to Ground. Currents are positive into, negative out of the specified terminal.

Note 2: Voltage values are with respect to the anode terminal unless otherwise noted.

Note :

1. For PK package, Thermal Resistance-Junction to Tab ($\theta_{JT} = 35^\circ\text{C}/\text{W}$). $T_J = T_{TAB} + (P_D \times \theta_{JT})$.
 P_D : Power Dissipation.

2. θ_{JA} : Thermal Resistance-Junction to Ambient, $D_F = 1/\theta_{JA}$.
Junction Temperature Calculation: $T_J = T_A + (P_D \times \theta_{JA})$.

The θ_{JA} numbers are guidelines for the thermal performance of the device/PC-board system.
All of the above assume no ambient airflow.
